

Referral Pathways

These Referral Pathways provide health and community care professionals with information about state based or national services available to help manage aspects of MND. For information about local services contact the state MND Association.

Individual health areas vary considerably in the resources and services available and the management of people with MND can be fluid over time. It can be useful for individual teams/health areas to devise an MND care pathway that works for them. See MNDcare approach section of this website.
